VReadyToDrive

An educational driving simulator - Semester Project

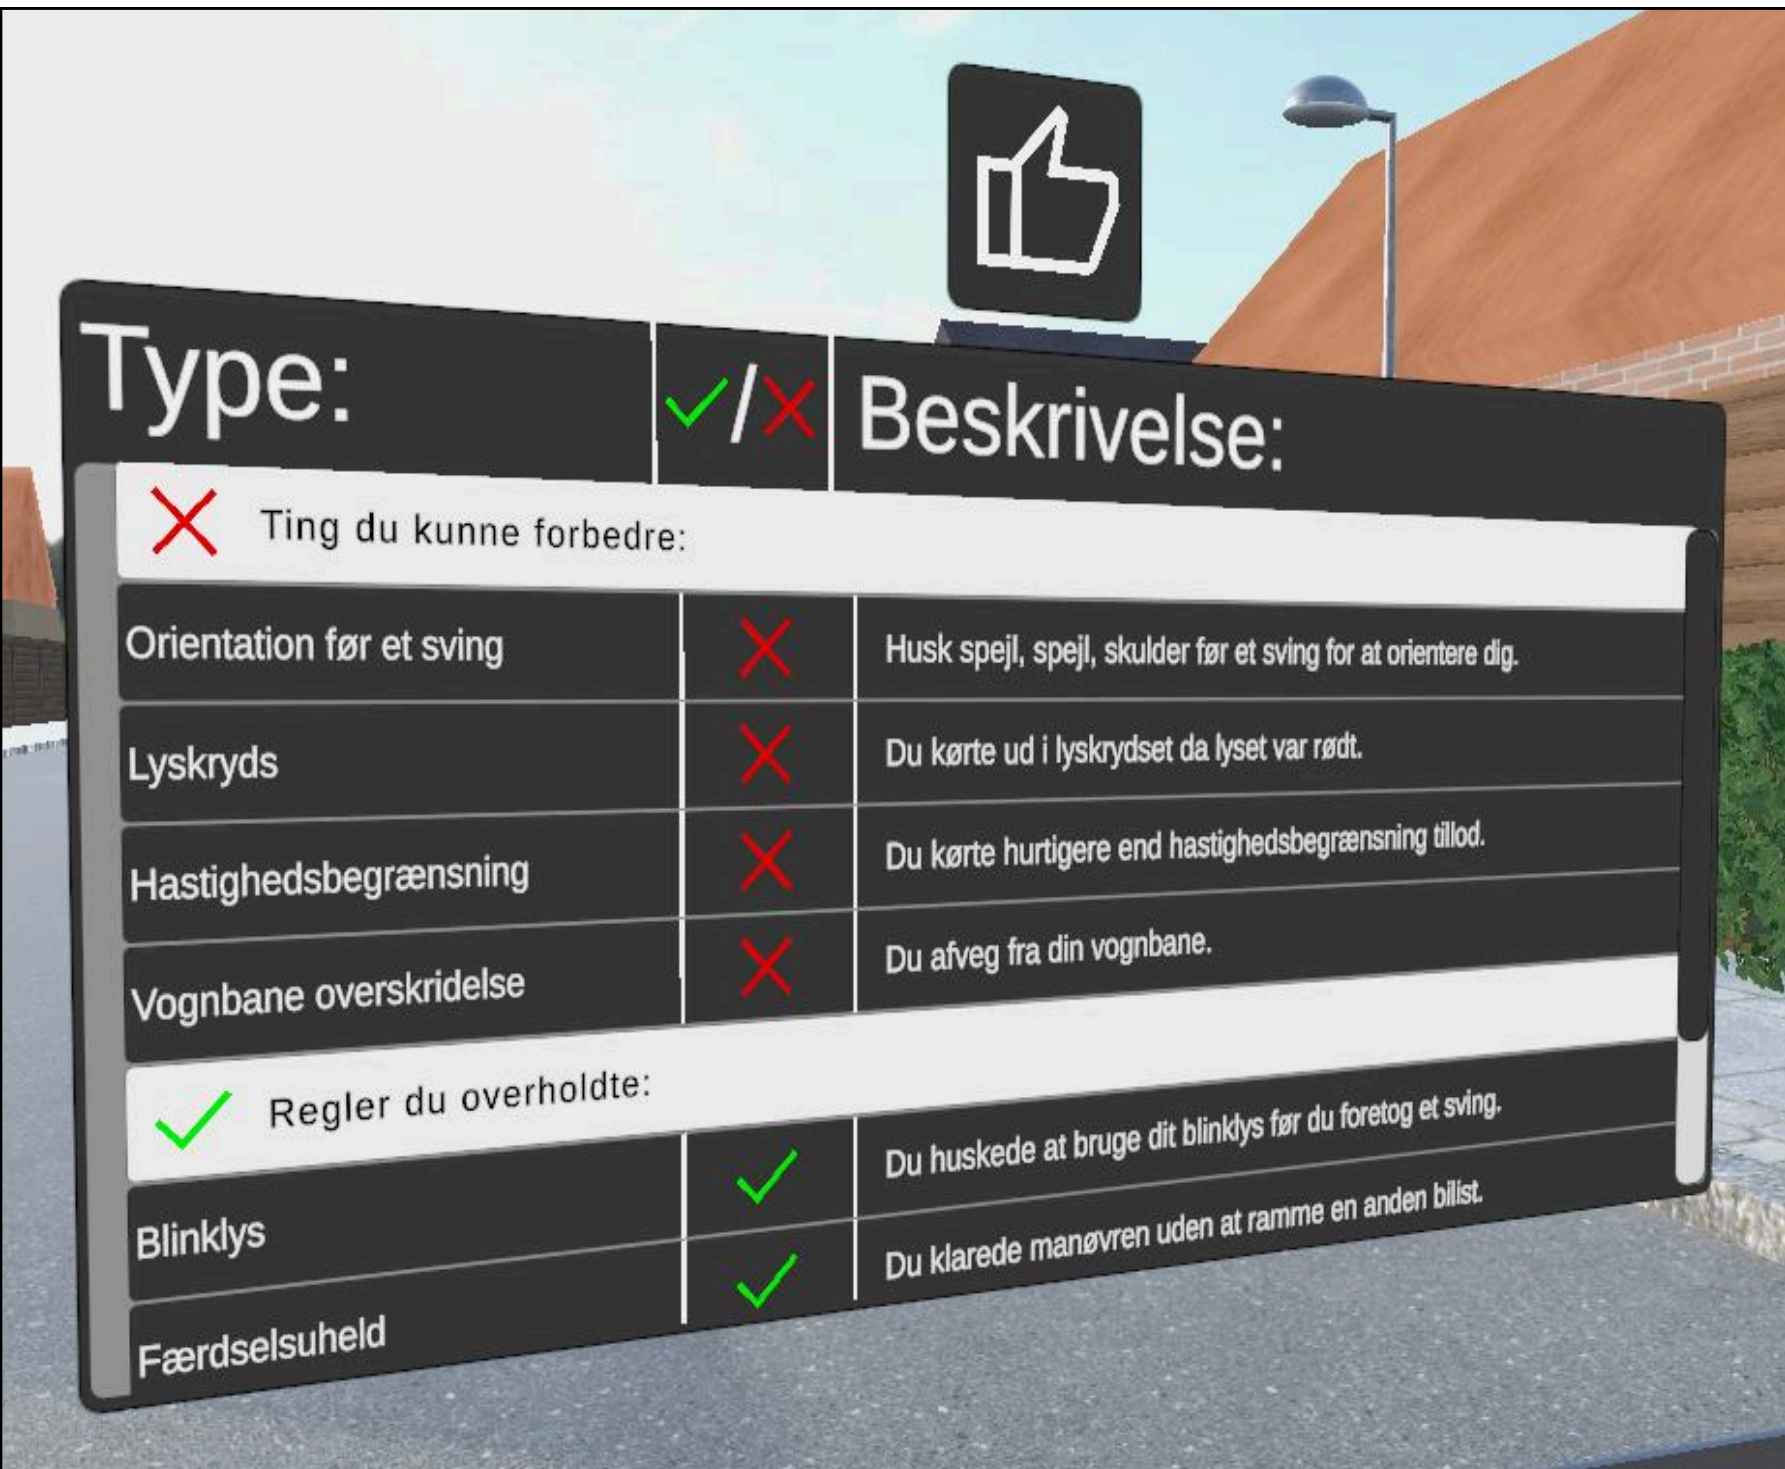

The Rundown

A scenario-based driving training system in Unity that uses immersive VR and physical steering interfaces to allow for safe driving training, as a supplement for danish driving schools.

Main contributions

- Designed and implemented an error detection system that monitors user orientation and driving behavior to identify areas of improvement
- Various game play scripts
- Planned and conducted product tests
- Research and report writing

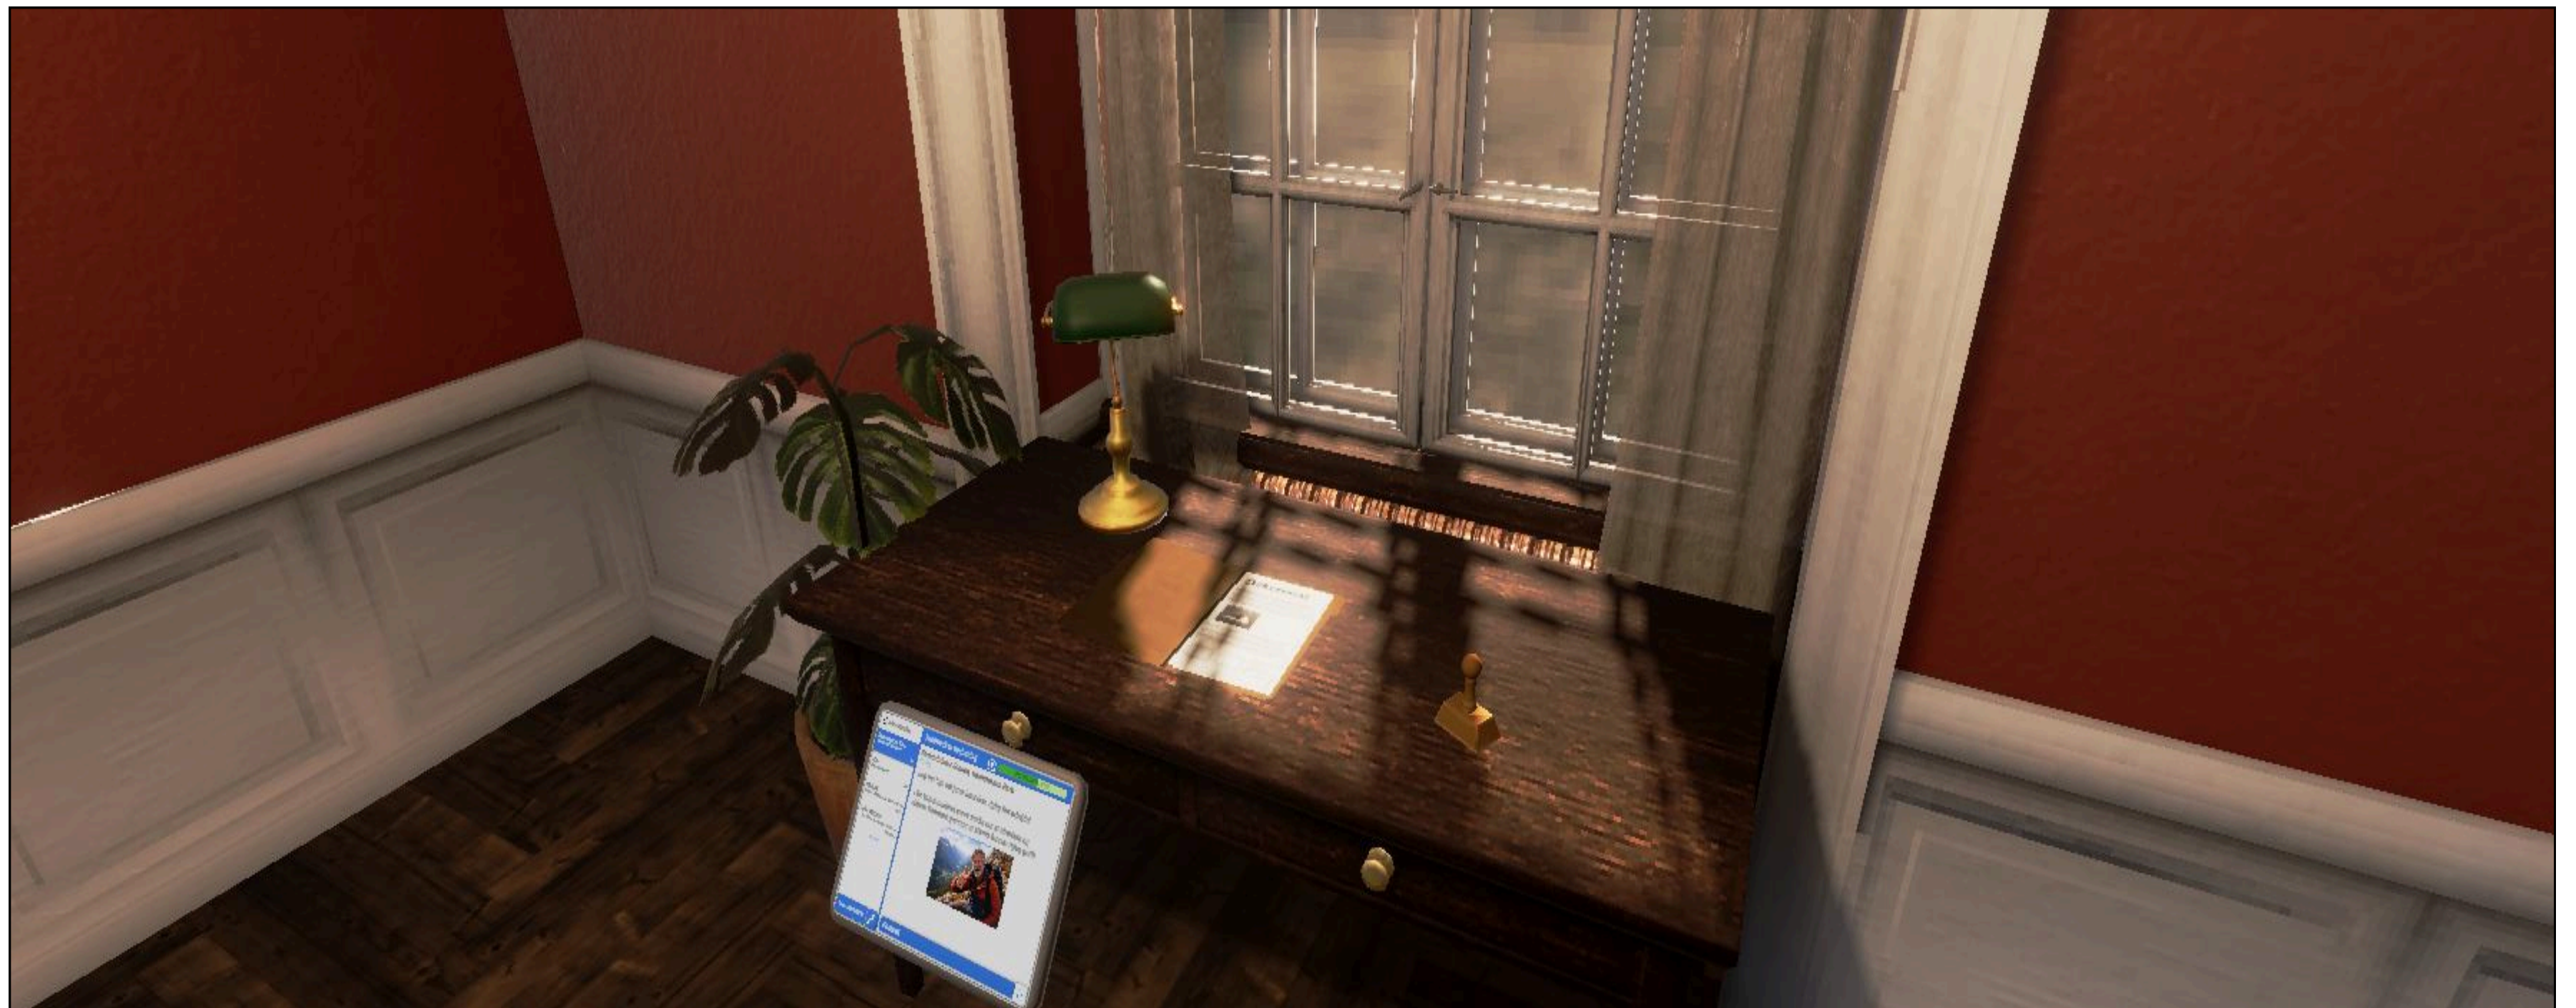

More

This project has been accepted by the ICVR 2026 committee and is awaiting publication.

Udenrigsministrene

A collaborative serious game - Bachelors Project

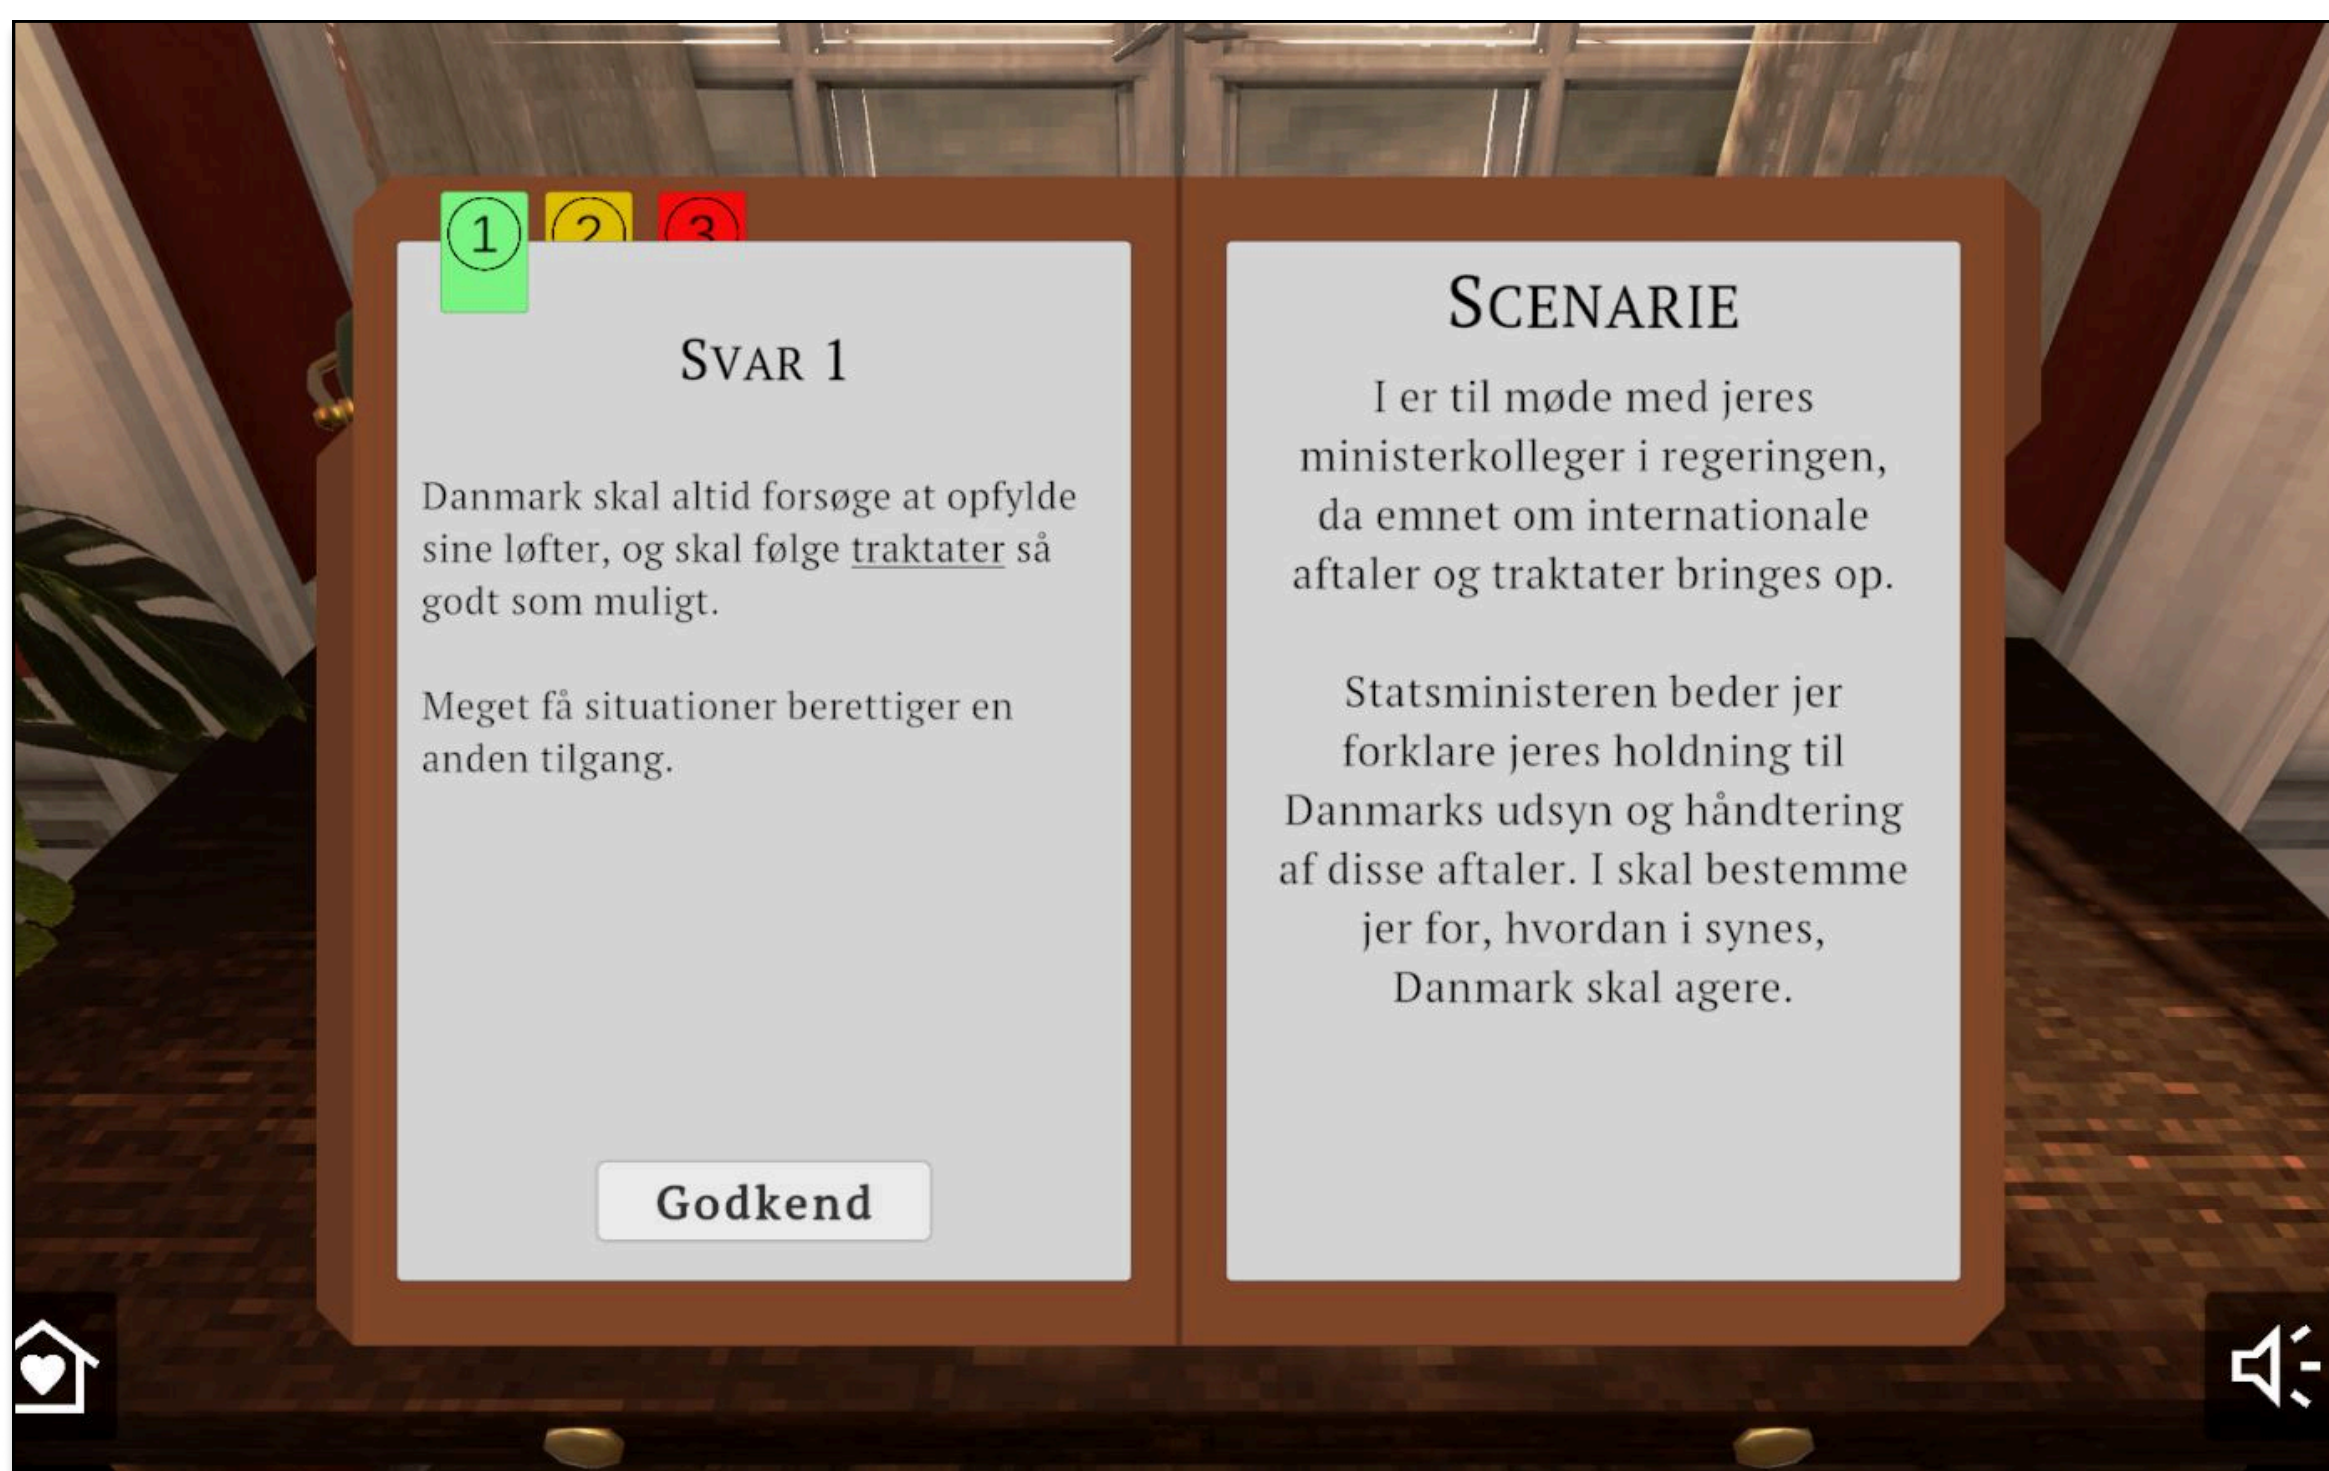

The Rundown

A serious social studies game, developed in Unity for web-based use, where players take the role of a foreign minister and attempt to make policy decisions that aligns with party ideologies to practice their understanding of International politics.

Main contributions

- UI Design
- Planned and conducted tests on target audience
- Research and report writing

More

This project is still ongoing.

Made in collaboration with N. Zahles Gymnasium

VR FPS PC RTS

An asymmetric VR game - Semester Course Project

The Rundown

An asymmetric multiplayer game combining a VR first-person shooter (FPS) with a real-time strategy (RTS) PC, hosted locally and made in Unity.

Main contributions

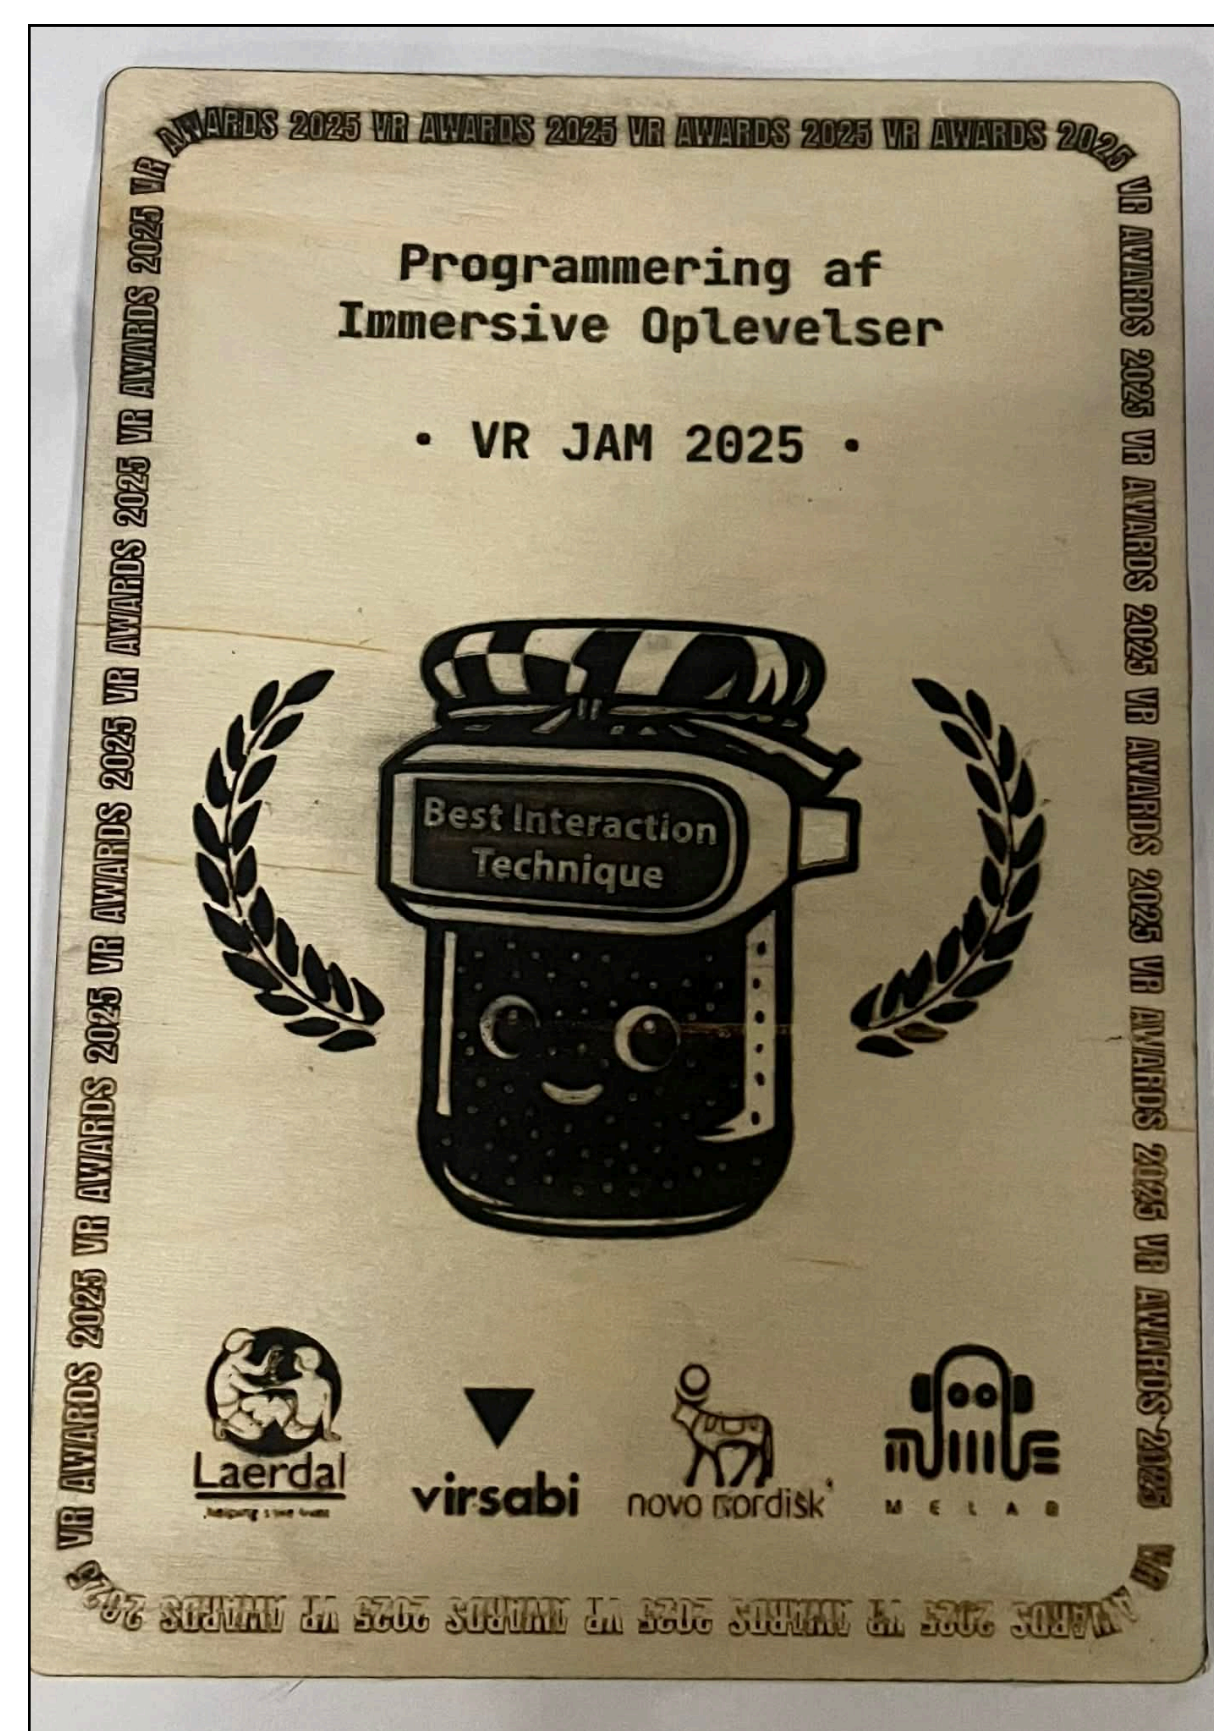

- Implementing XRI Toolkit
- Weapon logic scripts, animation and VR interaction
- Blender 3D Modeling
- Various game play scripts

More

This project was awarded “Best interaction technique” at AAU VR JAM 2025

SignLab

A Sign language learning game - Semester Project

The Rundown

A VR-based Danish sign language puzzle learning game that uses hand tracking, XRI Toolkit, and XR hands to recognize and translate hand gestures into puzzle-solving gameplay.

Main contributions

- Implementation of XR Hands and custom hand gestures.
- Designing, scripting and implementation of puzzles
- Research and report writing
